

- Neutrophil degranulation
- defense response to bacterium
- Metal sequestration by antimicrobial proteins
- chemotaxis
- inflammatory response
- cytokine production
- cytokine-mediated signaling pathway
- regulation of cell activation
- positive regulation of response to external stimulus
- adaptive immune response
- regulation of immune effector process
- negative regulation of interleukin-5 production
- negative regulation of immune system process
- myeloid cell differentiation
- negative regulation of cytokine production
- hematopoietic stem cell homeostasis
- negative regulation of natural killer cell activation
- regulation of biological process involved in symbiotic
- regulation of angiogenesis
- homeostasis of number of cells
